Senior Cloud & AI Consultant | AI-Enabled Solutions Architect

PROFESSIONAL SUMMARY

Senior Cloud & AI Consultant with 15+ years architecting and delivering enterprise solutions across AWS and Azure for clients in Singapore and APAC. Specializes in designing AI-enabled automation platforms — combining GenAI agents (AWS Bedrock), serverless services, and Microsoft Power Platform/Logic Apps to streamline security operations, IT workflows, and business processes. Proven record of leading architecture, integrating AI/LLM capabilities into production systems, and driving measurable outcomes in cost, response time, and operational efficiency.

CORE SKILLS

Cloud Platforms: AWS (Lambda, Bedrock, DynamoDB, Step Functions, API Gateway, SQS, IAM, CloudWatch); Microsoft Azure (Logic Apps, Functions, Sentinel, Entra ID, Azure AD, Storage, Key Vault); AWS & Azure Solution Architecture

AI / GenAI / LLM: AWS Bedrock (Claude, Titan), agent design & prompt engineering, Retrieval-Augmented Generation (RAG), vector databases, AI chatbot architecture, n8n AI workflows, WhatsApp Cloud API + LLM integration, model selection & token optimization

Automation & Integration: Microsoft Power Platform (Power Automate, Power Apps, Power BI, Power Virtual Agents), Azure Logic Apps, n8n, REST/Graph APIs, webhook & event-driven integrations, multipart HTTP, AWS SigV4

Security & Identity: Microsoft Sentinel (KQL detections, playbooks), Securonix SIEM, Entra ID / Azure AD (MFA, Conditional Access, identity sync), Microsoft Graph delta sync, M365 Security & Compliance, Fleet MDM, BitLocker monitoring

Data & Storage: PostgreSQL, Microsoft SQL Server, DynamoDB, SharePoint Online lists/libraries, Power BI dashboards, on-premises data gateway, ETL & sync pipelines

DevOps & IaC: PowerShell, Bash, Git/GitHub, Docker, CI/CD pipelines, Hostinger VPS deployments, infrastructure scripting, monitoring & alerting

Programming & Tools: C# / .NET 8, Python, PowerShell, JavaScript/TypeScript, jQuery, REST/JSON, SPFx, CSOM/JSOM, Node.js

Microsoft 365: SharePoint Online & On-Premises (2013–2019), Teams, Exchange Online, OneDrive, Yammer, Sharegate & SPMT migration tooling

PROFESSIONAL EXPERIENCE

Senior Technical Consultant — Cloud & AI Automation — NEC Asia Pacific Pte Ltd, Singapore | Feb 2017 – Present

Architecting AI-enabled cloud automation platforms for security operations, IT, and enterprise workflow customers across APAC.

AI & GenAI Solution Architecture

- Designed and delivered an AI agent platform for automated security incident response, integrating Microsoft Sentinel, Azure Logic Apps, AWS Bedrock (Claude), Lambda, and DynamoDB — enabling AI-driven triage of suspicious sign-ins and reducing analyst handling time by an estimated 60–70%.
- Architected serverless RAG and AI agent workflows on AWS Bedrock, applying model selection and prompt-engineering techniques that reduced token consumption and lowered inference cost by 30–40% while maintaining response quality.

- Engineered cross-cloud integration pattern between Azure Logic Apps / Power Automate and AWS services using Lambda proxy and API Gateway with API key auth, solving SigV4 authentication limitations and unblocking AI agent calls from Microsoft workflows.
- Designed asynchronous webhook-callback architecture using SQS and Step Functions to bypass Power Automate's 2-minute action timeout, enabling reliable long-running AI and document-processing tasks.
- Built AI-powered chatbots on n8n with WhatsApp Cloud API and LLM backends for service-industry clients (beauty, dental, lifestyle) — designing system prompts, conversation flows, and Hostinger VPS/Docker deployments.

Security Automation & SIEM Engineering

- Customized Microsoft Sentinel KQL detections for risky sign-ins from new geographies (with user/location filtering), improving SOC alert precision and reducing false positives for an APAC enterprise customer.
- Developed a Securonix SIEM playbook custom action in Python (Spotter API) handling authentication, timezone normalization, response parsing, and policy-based filtering — automating violation enrichment within incident response workflows.
- Architected a NOC-to-SOC alert escalation pipeline with documented swim-lane flow, standardizing handoff between operations and security teams.
- Built Logic Apps automation for disk-space alerts, email-status verification via Microsoft Graph, and Outlook category assignment — improving alert MTTA and operational visibility for a major airport-group client.

Identity, Endpoint & Microsoft 365

- Designed and built a C# .NET 8 service implementing a dual-delta sync strategy against the Microsoft Graph /groups/{id}/members/microsoft.graph.user/delta endpoint — synchronizing Entra ID group membership to PostgreSQL with full DDL, service architecture, and stakeholder presentation.
- Architected Fleet MDM automation with osquery policies, Node.js CORS proxy, and PowerShell remediation scripts (e.g., Print Spooler hardening) — automating endpoint vulnerability remediation and BitLocker policy monitoring at scale.
- Implemented Azure AD / Entra ID identity and access controls — Conditional Access, MFA for enterprise apps, data governance, and retention — across multiple enterprise tenants.
- Led Office 365 tenant setup, ADFS sync, and large-scale SharePoint 2013 → SharePoint Online migrations using Sharegate and SPMT, with zero-data-loss cutovers.

Power Platform & Modern Workplace

- Modernized SharePoint customizations by migrating legacy JavaScript form solutions to Power Apps — producing customer-facing migration risk and rationale documentation that drove executive approval.
- Built Power Automate flows handling email bounce-back detection, OOO filtering, SLA monitoring with DynamoDB, and email thread tracking via unique subject IDs — automating high-volume support workflows.
- Delivered Power BI embedded dashboards over on-premises SQL via data gateway, and Power Apps front-ends replacing manual SharePoint forms.
- Developed SPFx, CSOM, REST, and C#/.NET solutions for SharePoint Online & On-Premises, including Document Management System (DMS) implementations with approval workflows and retention policies.

Technical Consultant — Maybank, Singapore | Feb 2014 – Jan 2017

- Architected and deployed SharePoint 2013 farm including Web Front-End and Database tier configuration, Search, and User Profile services for a top-tier ASEAN bank.
- Designed site collections, content types, document libraries, and custom workflows supporting business and compliance use cases.
- Developed custom web parts, master pages, and page layouts; led enhancements, bug fixing, and Agile delivery cycles.

Application Consultant — NCS Pte Ltd, Singapore | Nov 2012 – Jan 2014

- Delivered ASP.NET and SharePoint 2010 solutions for government and enterprise clients — web parts, features, application pages, and customized lists/libraries.

- Led requirements gathering and stakeholder workshops; built branded department portals using jQuery and JavaScript.

Application Consultant — Ogilvy & Mather, Singapore | *Mar 2012 – Nov 2012*

- Architected and developed digital asset management modules in ASP.NET / SharePoint 2010 with NHibernate, later re-architected to Entity Framework.
- Delivered the Event Photo Gallery module and customized asset libraries with jQuery.

Application Developer — International SQLStar Pte Ltd, Singapore | *Oct 2010 – Mar 2012*

- Built three-tier ASP.NET / MOSS 2007 applications with C# middleware, WSP Builder solutions, custom web parts, event handlers, and site definitions.
- Implemented scheduled console-based email triggers and SharePoint Solution Installer deployments.

Application Developer — RVMatrix Software Technologies, India | *May 2009 – Jan 2010*

- Developed internet applications using HTML, JavaScript, IIS, COM, .NET, and XML; performed SQL Server query optimization, normalization, and integration with existing systems.

SELECTED AI & CLOUD PROJECTS

AI Security Operations Agent — Multi-cloud GenAI Platform

- Multi-Logic-App AI agent automating Microsoft Sentinel incident response (e.g., new-country sign-ins), integrating AWS Bedrock for AI decisioning, Lambda for processing, DynamoDB for state, and Office 365 for analyst notifications.
- Stack: Azure Sentinel, Logic Apps, AWS Bedrock (Claude), Lambda, DynamoDB, SQS, Step Functions, Microsoft Graph.

Entra ID → PostgreSQL Group Sync Service

- C# .NET 8 console service implementing a dual-delta sync against Microsoft Graph for high-volume group membership synchronization, with idempotent state handling.
- Stack: .NET 8, Microsoft Graph delta APIs, PostgreSQL, Azure AD app registrations.

Fleet MDM + Logic Apps Vulnerability Remediation

- Automated software-vulnerability remediation by orchestrating Fleet Scripts API from Logic Apps, with PowerShell remediations and a host-health HTML email reporting system.
- Stack: Fleet MDM, osquery, Logic Apps, PowerShell, Node.js CORS proxy.

AI WhatsApp Chatbots for SMB Clients

- Designed and deployed n8n-based AI chatbots integrated with WhatsApp Cloud API and LLMs, including system-prompt design, webhook troubleshooting, and Hostinger VPS/Docker hosting.
- Stack: n8n, WhatsApp Cloud API, LLM providers, Docker, Hostinger VPS.

EDUCATION & CERTIFICATIONS

Master of Computer Application: Alagappa University, India (2006 – 2009)

Bachelor of Computer Science: Alagappa University, India (2003 – 2006)

- Microsoft Certified: Azure Solutions Architect (AZ-300)
- Microsoft Certified Technology Specialist (MCTS) — SharePoint 2010, Application Development
- ISO 20000 Service Management System (SMS) Requirements — Training Completed
- Service Excellence Award — NEC Asia Pacific (Fuji Xerox DMS Transition Project, 8 countries)
